

## Recorded Future and Farsight Security

# Gain Valuable Insight into Adversaries' Networks with Farsight Security

Recorded Future and Farsight Security are working together to provide fast, accurate DNS intelligence about cyberthreats facing today's organizations.

## Technology Overviews

### Recorded Future

Recorded Future delivers security intelligence to amplify the effectiveness of security and IT teams by informing decisions in real time with contextual, actionable intelligence. By analyzing data from open, dark, and proprietary sources, Recorded Future offers a seamless, integration-ready view of threat information to empower organizations to reveal unknown threats before they impact business, and enable teams to respond to Farsight Security findings faster. Recorded Future delivers more context than threat feeds, updates in real time so intelligence stays relevant, and centralizes information ready for human analysis. Recorded Future's intelligence allows analysts to detect potential threats in the network by correlating against telemetry data for the purpose of reducing time to verdict and risk to the organization.

### Farsight Security's Solution

Farsight Security DNSDB® is the world's largest DNS intelligence database that provides a unique, fact-based, multifaceted view of the configuration of the global Internet infrastructure. DNSDB leverages the richness of Farsight's Security Information Exchange (SIE) data-sharing platform and is engineered and operated by leading DNS experts. Farsight collects Passive DNS data from its global sensor array. It then filters and verifies the DNS transactions before inserting them into the DNSDB, along with ICANN-sponsored zone file access download data. The end result is the highest-quality and most comprehensive DNS intelligence service of its kind — with more than 100 billion domain resolution records and updated in real-time at over 200,000 times/second.

## Integration Highlights

View and interact with structured and consumable real-time threat intelligence.

Gain unique insights about global threat actors, their methods, and associated technical indicators—organized in single-view Intelligence Cards.

Expand your investigations by examining applicable DNS records—such as multiple A records and nameserver (NS) changes over the history of the domain.

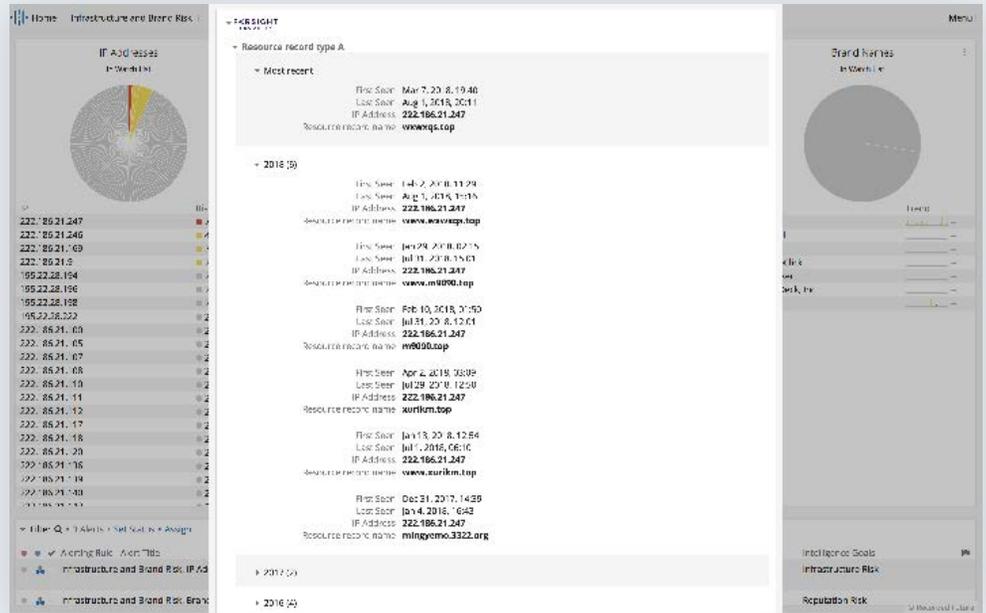

Retrieve and pivot on passive DNS (pDNS) records for hostnames and IP addresses.

# Integration Use Cases

## Challenges overcome through integration

- ✔ Protect your brand by uncovering subdomain abuse.
- ✔ Block your infrastructure from being used by bad actors.
- ✔ “Turn back the clock” to view internet infrastructure as it was at a certain point in time.
- ✔ Proactively detect patterns of malicious activity and identify phishing, APT, or other targeted attacks.

### About Recorded Future

Recorded Future delivers the only complete security intelligence solution powered by patented machine learning to lower risk. We empower organizations to reveal unknown threats before they impact business, and enable teams to respond to alerts 10 times faster. To supercharge the efforts of security teams, our technology automatically collects and analyzes intelligence from technical, open, and dark web sources and incorporates intelligence research. Recorded Future delivers more context than threat feeds, updates in real time so intelligence stays relevant, and centralizes information ready for human analysis and integration with security technologies. Security team productivity improves by 32% with Recorded Future.

### About Farsight Security

Farsight Security is the world's largest provider of historical and real-time passive DNS data. We enable security teams to qualify, enrich and correlate all sources of threat data and ultimately save time when it is most critical - during an attack or investigation. Our solutions provide enterprise, government and security industry personnel and platforms with unmatched global visibility, context and response. Farsight Security is headquartered in San Mateo, California, USA.
