Farsight Security® can help your organization block 120,000+ malicious domains...every day. If the malicious link pointed to a newly created domain, it could have been blocked. Farsight Newly Observed Domains (NOD) solution provides organizations with real-time actionable insights based on the newness of a domain. This enables them to protect their users from newly configured and used domains until those domains are better understood by the rest of the security industry such as spam filters and reputation providers—thereby materially improving their risk profile. Learn more about NOD at https://www.farsightsecurity.com/solutions/threat-intelligence-team/newly-observed-domains/
